

### [ Machine Description ]

STUFFERTEK - A foam mattress sock or cover stuffing machine.

This innovative design detects the product dimensions before entry and automatically adjusts to suit.

The stuffer conveyor arms also contract to make it easy for the operator to load the sock cover or mattress cover over the conveyor arms.

There is also a very innovative conveyor drive system that allows 1 motor and gearbox to drive all 4 top conveyors at the same time removing the need to have a drive for each conveyor and slip.

Strong, robust, quality UK manufactured machine, that is fully CE marked and can be integrated simply into a new or existing conveyor line.

MATTRESSTEK machines are designed to be maintenance friendly. Mechanical and electrical assemblies can be easily replaced and simply plugged in, reducing the need for an electrical / mechanical technician.

All MATTRESSTEK machines are designed, manufactured and built at our premises in the UK, by our team of experienced fabricators and machine builders.

Prior to shipment all machines are meticulously tested and trialled on customer samples.
